Department of Computer Science and Engineering

ASSESSMENT TOOL 1 – Coding Challenge Task

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO4: Articulation (BL4, BL5)	Assessment:	Assessment Tool 1 – Coding Challenge Task
Weightage:	40% of CIA	Total Marks:	100
CO4 Statement:	Solve optimization problems using dynamic programming and greedy strategies.		
Student Name:	M PRITHIYANKA SHREE	Reg. No.:	192521144
Section / Batch:	2025	Date:	13-08-2026

Instructions to Students

- Answer the following question. Total Marks: 100.
- Carefully analyze the given questions.
- Write clear code for the given problem.
- Analyze the Time complexity and Space complexity of your code using dynamic programming and greedy strategies

Question Type	Focus Area	Questions
Coding Challenge Task	Focus on Code and analyze optimization problems using dynamic programming and greedy strategies	Q1

SECTION A – Coding Challenge Task

A communication network consists of multiple nodes where not all nodes are directly connected. The system needs to compute the shortest path between every pair of nodes to optimize routing. Using the Floyd-Warshall algorithm, update the distance matrix to reflect the shortest possible paths between all node pairs.

Code of Conduct

I M PRITHIYANKA SHREE (192521144) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION

Coding Challenge Task

Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Problem Understanding	20%	Clearly understands problem constraints, edge cases, and competitive requirements	Understands problem with minor gaps in constraints	Partial understanding; misses key constraints	Misinterprets problem or constraints
Algorithm	25%	Selects optimal algorithm with best time and space complexity for competitive constraints	Uses efficient algorithm with minor scope for improvement	Uses basic/inefficient approach	No clear algorithmic approach
Code Implementation	20%	Writes correct, efficient, and clean code that passes all constraints	Code works with minor errors or inefficiencies	Partially correct code; fails for some cases	Code does not execute or gives incorrect results
Competitive Performance	20%	Solves problem within time limits and handles large inputs effectively	Solves within acceptable time with minor delays	Struggles with time limits or larger inputs	Unable to solve within time constraints
Test Case Handling	15%	Handles all test cases including edge and hidden cases	Handles most test cases	Misses important edge cases	Fails on multiple test cases

Marks Evaluation:

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Problem Understanding	20%				
Algorithm	25%				
Code Implementation	20%				
Competitive Performance	20%				
Test Case Handling	15%

Your Code

```
1 n = int(input())
2
3 dist = []
4
5 for i in range(n):
6     row = list(map(int, input().split()))
7     dist.append(row)
8
9 # Floyd-Warshall Algorithm
10 for k in range(n):
11     for i in range(n):
12         for j in range(n):
13             new_distance = dist[i][k] + dist[k][j]
14
15             if new_distance < dist[i][j]:
16                 dist[i][j] = new_distance
17
18 # Print shortest distance matrix
19 for i in range(n):
20     for j in range(n):
21         print(dist[i][j], end=" ")
22     print()
```

INPUT AND OUTPUT:

Input

```
4
0 5 99999 10
99999 0 3 99999
99999 99999 0 1
```

Output

```
0 5 8 9
99999 0 3 4
99999 99999 0 1
99999 99999 99999 0
```
