

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)
 Department of Computer Science and Engineering
ASSESSMENT TOOL 2 – CONCEPT MAPPING

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO1 – Precision (BL1, BL2, BL3)	Assessment:	Assessment Tool 2 – Concept Mapping
Weightage:	20% of CIA	Total Marks:	100 (2 Questions × 50 Marks)
CO1 Statement:	<i>Determine algorithm efficiency using asymptotic notations and mathematical techniques including Master Theorem and substitution method. (BL1, BL2, BL3)</i>		
Student Name:	PRITHIYANKA SHEE M	Reg. No.:	192521144
Section / Batch:	IT-2025	Date:	24-07-2026

Instructions to Students

- Answer BOTH questions. Each question carries 50 Marks. Total: 100 Marks.
- Draw a clear and neat concept map for each question.
- Identify all key concepts and arrange them in a logical hierarchy.
- Show meaningful linkages between concepts using arrows and connecting words.
- Compare related concepts wherever required and justify the relationships clearly.
- Ensure the concept map is well-organized, readable, and properly labelled.

Question Type	Focus Area	Questions	Marks
Concept Mapping	Map algorithm efficiency concepts using asymptotic analysis, search techniques, recurrence relations, and recursion tree method	Q1 – Q2	Q1 –50 Q2 –50
GRAND TOTAL:			100 Marks

SECTION A – CONCEPT MAPPING

Explain how algorithms are categorized based on growth rates. Extend the map by linking Asymptotic Notation. Justify why lower growth rates are preferred for scalability. Interpret how this map helps select efficient algorithms.

Code of Conduct

I M PRITHIYANKA SHREE(192521144) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: M PRITHIYANKA SHREE

RUBRICS FOR CALCULATION

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Concept Identification	25%	Identifies all key concepts from literature accurately and comprehensively	Identifies most key concepts with minor omissions	Identifies limited concepts; some are irrelevant or missing	Fails to identify essential concepts
Linkages	25%	Establishes clear, meaningful, and accurate relationships between concepts	Shows correct relationships with minor gaps	Relationships are weak, unclear, or partially incorrect	No meaningful relationships established
Organization	20%	Concepts are well-structured hierarchically with logical flow and grouping	Mostly organized with minor structural issues	Some organization but lacks clear hierarchy	No logical organization or structure
Integration of Literature	20%	Integrates multiple studies effectively to show connections and comparisons	Shows some integration of literature	Limited integration; mostly isolated concepts	No integration of literature evidence
Clarity	10%	Concept map is clear, neat, visually structured, and easy to interpret	Generally clear with minor readability issues	Clarity is reduced; difficult to interpret in parts	Poorly presented and hard to understand

Marks Evaluation:

Question No.	Concept Identification (25%)	Linkages (25%)	Organization (20%)	Integration of Literature (20%)	Clarity (10%)	Total Marks (Each – 50)
Q1						
Q2						
Overall Total (100)

ALGORITHM EFFICIENCY

3. Growth rate analysis
Algorithms are categorised based on how fast their running time grows.

Common Growth rate

$O(1)$ - constant

$O(\log n)$ - Very efficient

$O(n)$ - Efficient

$O(n \log n)$ - Linearithmic

$O(n^2)$ - Slower

$O(2^n)$ - Very slow

2. Mathematical Techniques

Method to determine the time complexity of algorithms

Substitution Methods

bound for $T(n)$

Master Theorem

$$T(n) = aT(n/b) + f(n)$$

Determine the time complexity Θ of the Algorithm

Why lower growth rates are preferred

1. Asymptotic Notation

Mathematical tools to describe the growth of algorithm's running time.

Big-O

$O(f(n))$

Worst Case

Big-Ω

$\Omega(f(n))$

Best case

Big-Θ

$\Theta(f(n))$

Asymptotically exact

Faster Execution

Runs quickly even as input size increases.

Less Memory Usage

Requires fewer resources for large inputs

Handles Large Inputs

Scales well with big datasets without huge performance drop.
